

Matthew Jung

mjj8@meta.com | 206-492-0575

ABOUT ME

Interests: Agents, Intelligent Systems, ML, ML/Sys Infra

Technologies: Python, C++, MAST & FBLeaRner, Tupperware

WORK EXPERIENCE

Meta - MGenAI

Bellevue, WA

Software Engineer | Machine Learning Engineer

Mar. 2024 – Present

- Founding member (1 of 3) of MGenAI Eval team. Worked extensively on: benchmark creation for BizAI agent applications (e.g. i18n expansion); led design & implementation of distributed & async eval workflow for BizAI agent evals (Adopted org-wide [~100 engineers]); led design and implementation for LLM-as-a-judge auto evals.
- Founding member (1 of 3) of MGenAI post-training team. Built e2e Data FlyWheel workflows involving synthetic data generation & preference datasets for SFT, RLHF/DPO, and reward models. Efforts equated to > 4 pp lift in BizAI topline metrics.
- Post-training to improve ToolCalling + multi-step IF on 3P models. Worked extensively on many components throughout the stack: training data curation, benchmark creation for evals, co-led infra design & development for post-training (RLVR + GRPO) leveraging VeRL/Ray and in-house eval infra.

Meta - Ads Ranking

Bellevue, WA

Software Engineer | Machine Learning Engineer

Jan. 2022 – Mar. 2024

- Co-built the most-widely used AutoML System in Ads Ranking for blackbox optimization (e.g. Bayesian optimization with transfer learning) on Meta's largest/most complex models. Equated to 0.2% incremental iRev half-over-half since its inception.

Facebook - IG Well-Being

Menlo Park, CA

Software Engineer Intern

May 2021 – Aug. 2021

- LSTMs for hate-speech detection and mitigation. Make IG a safer, more inclusive space.

Amazon - AWS

Vancouver, CAN

Software Engineer Intern

Jun. 2020 – Apr. 2021

- Identify and terminate orphaned hosts to reduce downtime for large scale distributed clusters in AWS.

EDUCATION

Simon Fraser University

Vancouver, CAN

Bachelors Computer Science, Biochemistry

2021

- Top 5%
- 2x NSERC VPR Undergraduate Research Award Recipient
- Research in Biophysics on effects of ion-gated channel mutations and cardiac arrhythmias
